

ABSTRACT OF THE DISCLOSURE

A structure for mounting a shift operation device on the vehicle body comprises a support member having a main part to be fixed on the vehicle body and a molded plastic part to support the shift operation device which is dropped downwardly with the shift operation device when a larger load than that of a predetermined value is applied to the main part. Additionally, the main part and the molded plastic part are integrally formed into a single piece configuration, and the shift operation device is mounted on the vehicle body via the support member so that the larger load can break and drop the shift operation device.
